## 1 INTRODUCTION

- 1.1.1 This report sets out the development and validation of Surrey County Council's strategic transport model, SINTRAM, in the vicinity of the boroughs of Waverley and Guildford for the Local Plan strategic assessment work.

## 2 SCOPE

### 2.1 SINTRAM

- 2.1.1 Surrey County Council's transport model, SINTRAM version 6 (S6022\_GBCWBC\_LP\_110516) was the outcome of the development and validation process outlined in this report. It has been used for the assessment of both Waverley and Guildford's Local Plans. The model is run in conjunction with OmniTRANS modelling program, version 6.022.5874.

- 2.1.2 Strategic models such as SINTRAM use aggregate descriptions of traffic such as flow, density, speed and the relationships between them. The model is unable to answer detailed questions regarding traffic interactions, such as queuing and individual driver behaviour. It can however, provide approximate answers to transport problems across a vast geographical area including the level of vehicle demand, junctions and stretches of road which will be operating above their theoretical capacity, and highlighting areas where some form of mitigation is likely to be required.

### 2.2 Base Year

- 2.2.1 The model base year is 2009.

### 2.3 Modes of Transport

- 2.3.1 Vehicle classes that are represented in the model are: car; light good vehicles (LGV); and heavy good vehicles (HGV).

- 2.3.2 Public transport and active modes are not modelled.

### 2.4 Time Periods

- 2.4.1 The model represents a twelve-hour weekday (0700 – 1900), broken down into the following time periods:

- Weekday average AM peak hour (0700 – 1000);
- Weekday average inter peak hour (1000 – 1600); and
- Weekday average PM peak hour (1600 – 1900).

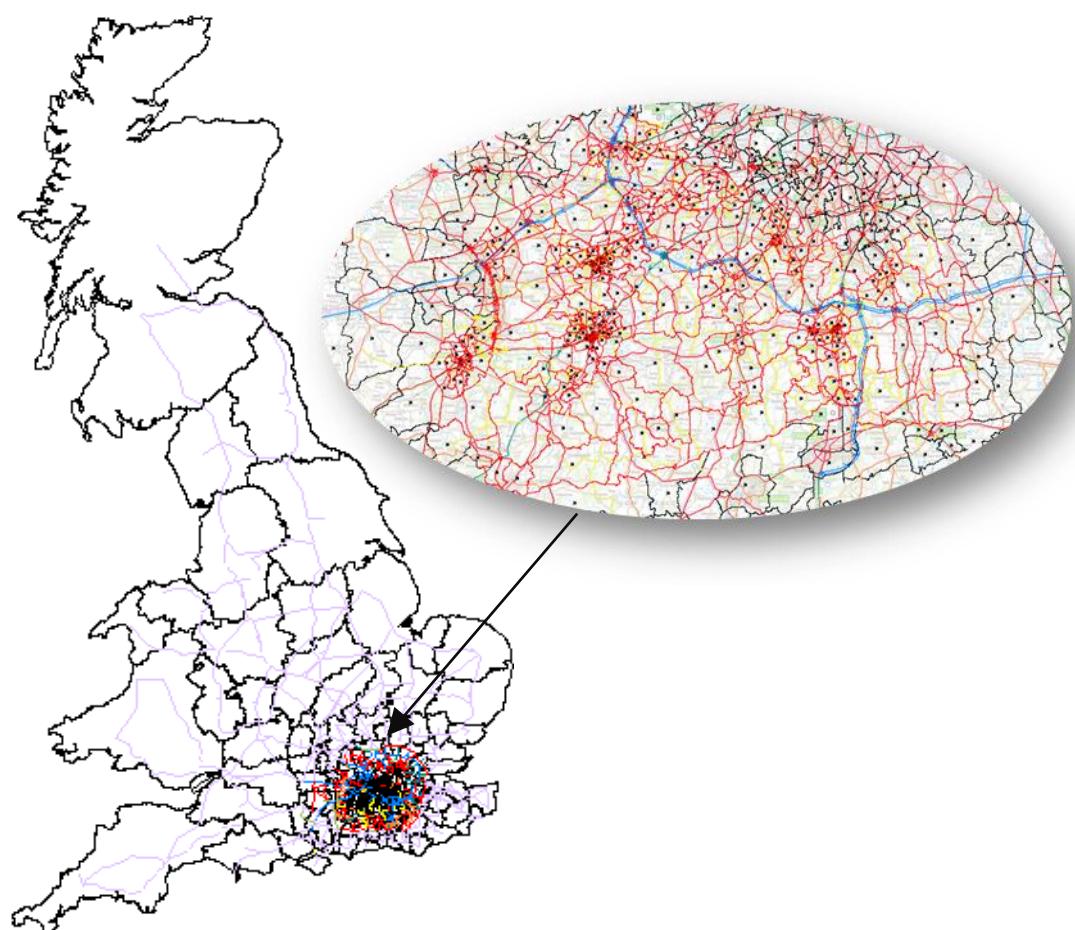

- 2.4.2 Since the majority of the future large scale developments are focused on residential land uses, the majority of trips will take place during the weekday peak hours. As a result only the weekday average AM and PM peak hours have been reported.

## 3 MODEL COVERAGE AND STUDY AREA

### 3.1 Model Coverage

- 3.1.1 SINTRAM is a strategic highway model for the county of Surrey. The model encapsulates the road network of Surrey and surrounding local authorities. The detail included in the model network becomes less refined as the distance increases from the county of Surrey. Consequently a skeleton network of strategic

links is used solely to carry long distance traffic to and from Surrey and its vicinity. **Figure 3.1** presents the entire model area.

**Figure 3.1: Model extent**

- 3.1.2 All motorways A and B roads, together with most local roads are represented in Surrey. Where traffic junctions and traffic signals have a significant effect in terms of delay and route choice, details of their layout and/or timing of the signals have been included in the model.

### 3.2 Study Area

- 3.2.1 The boroughs of Waverley and Guildford were incorporated within the validation process.
- 3.2.2 **Figures 3.2 and 3.3** present the extent of the model highway network that is contained in these boroughs.

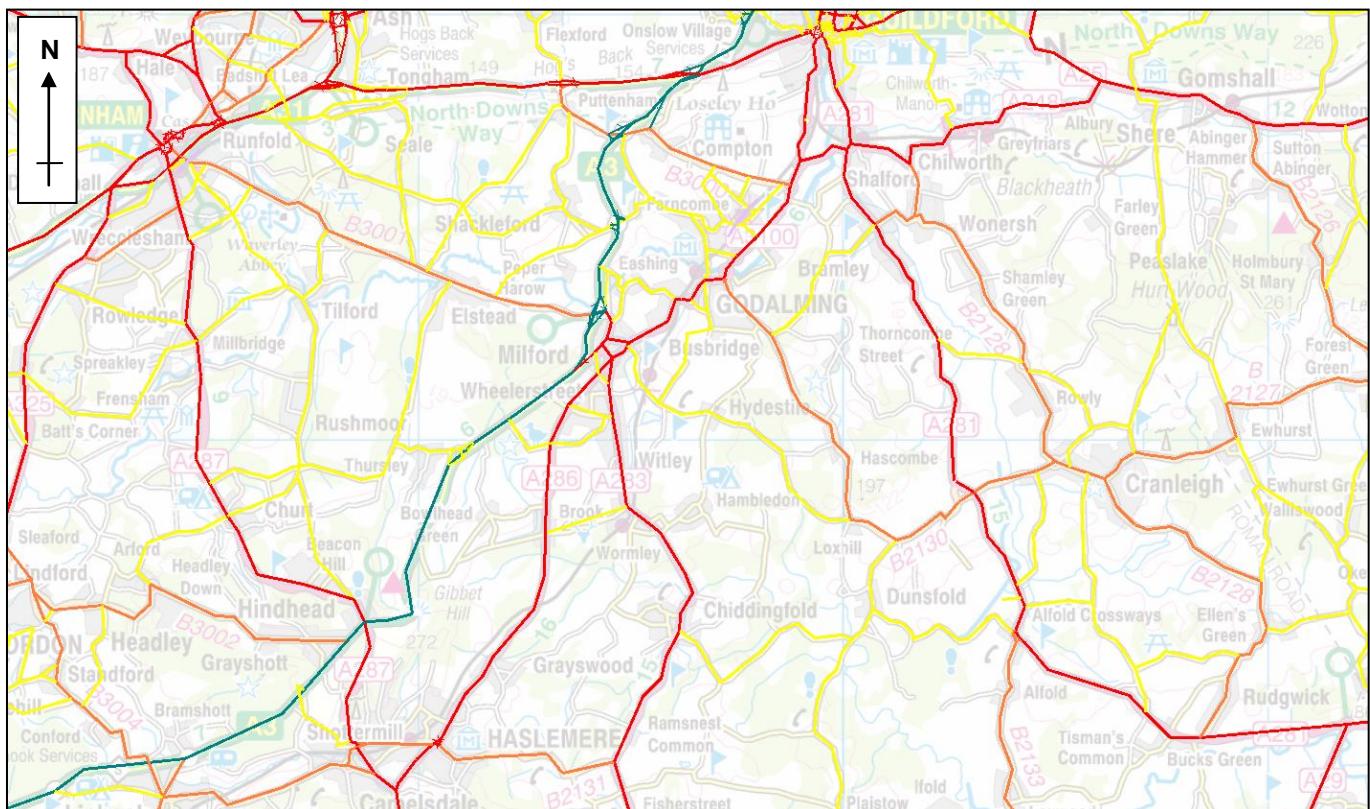

Figure 3.2: Study area of Waverley

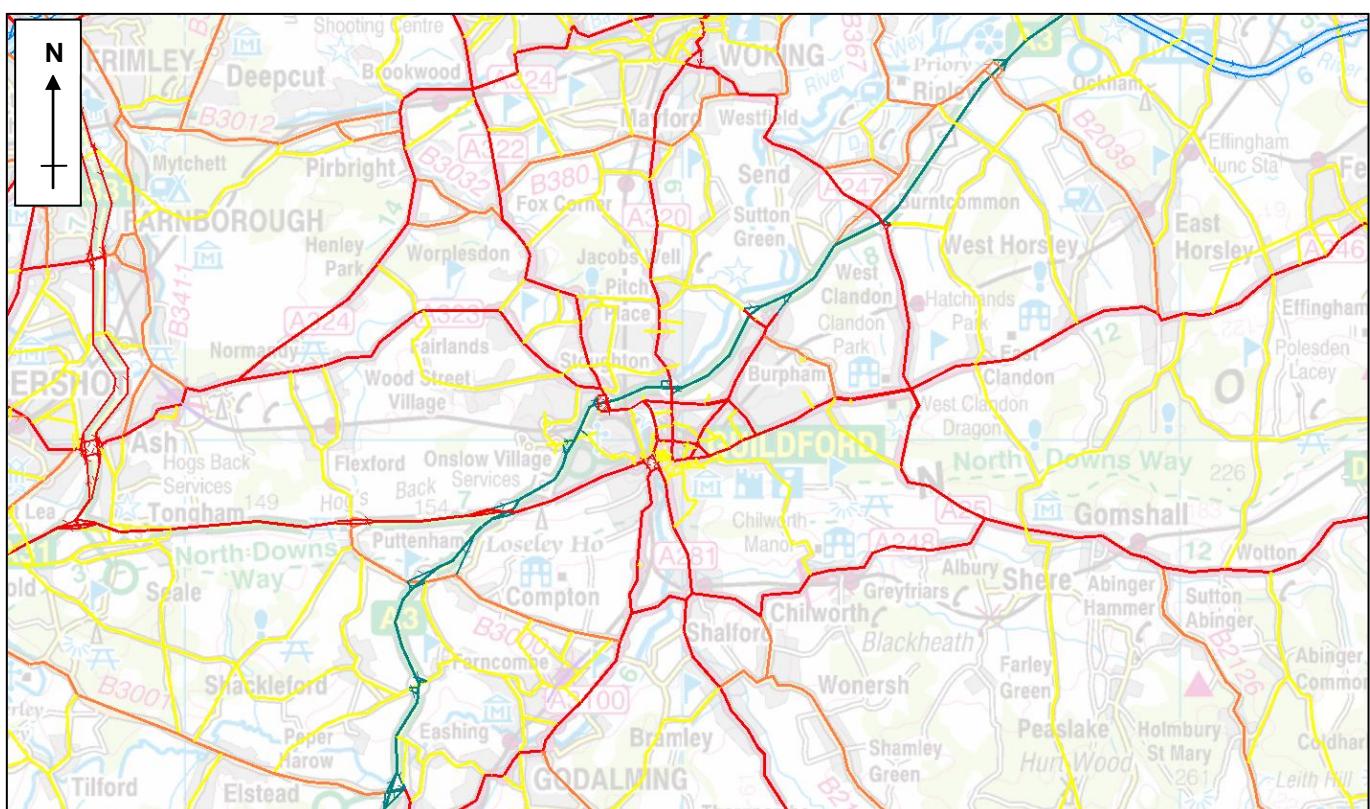

Figure 3.3: Study area of Guildford

### 3.3 Zones

- 3.3.1 There are 43 model zones in the borough of Waverley and 67 in the borough of Guildford.
- 3.3.2 The zones were reviewed to ensure that they were suitable for the assessment of the development sites. New zones were added to both boroughs, shown in blue, to contain the largest development sites and to ensure that the vehicle trips generated would access the highway network at a relevant point. This ensured that their impacts on the highway network could be captured more accurately.

#### Guildford Zones

72: Artington	502: Horsley - West Horsley
73: Ash & Normandy	519: Worplesdon
80: Guildford - Bellfields	526: Artington Park & Ride
94: Guildford - Burpham	528: Shalford Park Car Park
95: Guildford - Merrow	529: York Road Car Park
99: Guildford - Charlotteville	530: Manor Park Park & Ride
104: Clandon	531: Merrow Park & Ride
107: Compton	532: Tormead
119: Horsley - East Horsley & Effingham	533: Spectrum Park & Ride
133: Eastgate North	534: Stoke Park North
134: Guildford - Millmead & The Mount	535: Guildford - Merrow Common
135: Millmead	536: Boxgrove
136: Guildford Town Centre	538: Abbotswood
137: London Road	539: The Bars
162: Hogsback	540: Leapale Road
172: Guildford - RSCH & Research Park	541: Drummond Road
260: Stoke Park South	542: Eastgate South
265: Guildford - Merrow Downs	543: Tunsgate
278: Guildford - Onslow Village	544: Millbrook
279: Guildford - Park Barn	545: University of Surrey
281: Chilworth & Gomshall	546: Guildford Business Park
282: Pirbright	547: Guildford Bus Station
291: Ockham & Wisley	548: Bedford Road
294: Send	549: Guildford Rail Station
295: Ripley	550: Farnham Road Car Park
296: Shackleford / Eashing	551: Farnham Road Hospital
297: Shalford	552: Slyfield Residential
298: Guildford - Rydes Hill	574: Committed & Strategic Ash Development
306: Slyfield Industrial	575: Guildford NE Urban Extension
310: Guildford - Pewley Hill	576: Guildford SW Urban Extension
314: Guildford - St Marthas Hill	577: Wisley Development
317: Guildford - Woodbridge & Walnut Tree Close	578: Flexford & Normandy Development
318: Guildford - Stoughton	579: Waitrose
477: Guildford Park	

## Waverley Zones

71: Alice Holt	330: Milford
75: Badshot Lea	331: Wrecclesham
98: Farnham - West Street	332: Farnham - Hale
108: Farnham - Compton	333: Cranleigh - Cranleigh East
109: Runfold	334: Shamley Green
124: Farnham Hospitals	335: Wonersh
125: Farnham Park	336: Farnham - Weybourne West
126: Farnham Station	337: Godalmng - Busbridge
127: Farnham Town Centre East	338: Godalmng - Godalming Town Centre
300: Farnham - Weydon Lane & Shortheath	339: Godalmng - Charterhouse
309: Farnham - Firgrove Hill	340: Farncombe - Farncombe
319: Frensham & Tilford	341: Binscombe
320: Elstead & Thursley	468: Farnham - Dippenhall
321: Bramley & Winkworth Arboretum	471: Farnham - The Bourne
322: Chiddingfold & Dunsfold	503: Farnham - Weybourne East
323: Witley	564: Farnham Town Centre West
324: Alfold	569: Amlets Lane Development
325: Cranleigh - Cranleigh Town Centre	570: Dunsfold Development
326: Ewhurst	571: Coxbridge Farm Development
327: Haslemere - Shottermill	572: Littlemead Industrial Estate Development
328: Haslemere	573: West Cranleigh Nurseries Development
329: Hindhead	

## 4 MODEL VALIDATION

### 4.1 Assignment

- 4.1.1 The base matrices were assigned to the network using a fixed trip equilibrium assignment. This was performed using the method of successive averages (MSA) for 100 assignment iterations.

### 4.2 Link Flow Validation

- 4.2.1 Validation simply compares modelled and observed data. The observed and modelled link flows have been compared for each model and time period, in accordance with the Department for Transport's (DfT) validation acceptability guidelines<sup>1</sup>, presented in **Table 4.1**.

---

<sup>1</sup> Department for Transport (2014) Transport Appraisal Guidance Unit M3.1, Highway Assignment Modelling

Criteria	Acceptability Guidelines
<i>Link Flows</i>	
Individual flows within 100 vph of counts for flows less than 700 vph	
Individual flows within 15% of counts for flows from 700 to 2,700 vph	
Individual flows within 400 vph of counts for flows more than 2,700 vph	
GEH < 5 for individual flows	> 85% of cases

**Table 4.1: Flow validation acceptability guidelines**

- 4.2.2 Link flow validation compares the absolute difference between modelled flows and observed counts, together with the presentation of the GEH statistic. The GEH statistic is a form of chi-squared statistic that incorporates both relative and absolute errors, defined as:

$$GEH = \sqrt{\frac{(M - C)^2}{(M + C)/2}}$$

$GEH$  is the GEH statistic  
 $M$  is the modelled flow  
 $C$  is the observed flow

- 4.2.3 **Tables 4.2** and **4.3** presents the summary of the validation of the weekday average AM and PM peak hours in terms of the DfT's acceptability guidelines.

- 4.2.4 Both the flow and GEH criteria have been met in the borough of Waverley. The flow criteria is met in the borough of Guildford but narrowly misses the GEH criteria, by 1 - 2% during both the average AM and PM peak hours.

	Average weekday AM peak hour (0700 – 1000)			Average weekday PM peak hour (1600 – 1900)		
	Values	% met criteria	Counts met criteria	Values	% met criteria	Counts met criteria
No. of counts	87	-	-	86	-	-
Average GEH	1.20	-	-	1.55	-	-
GEH > 10	0	-	-	1	-	-
GEH < 5	87	97%	Yes	86	96%	Yes
Flow criteria	89	99%	Yes	86	96%	Yes

**Table 4.2: Link flow validation results for the borough of Waverley**

	Average weekday AM peak hour (0700 – 1000)			Average weekday PM peak hour (1600 – 1900)		
	Values	% met criteria	Counts met criteria	Values	% met criteria	Counts met criteria
No. of counts	409	-	-	409	-	-
Average GEH	2.94	-	-	3.00	-	-
GEH > 10	14	-	-	14	-	-
GEH < 5	340	83%	No	345	84%	No
Flow criteria	357	87%	Yes	358	88%	Yes

**Table 4.3: Link flow validation results for the borough of Guildford**

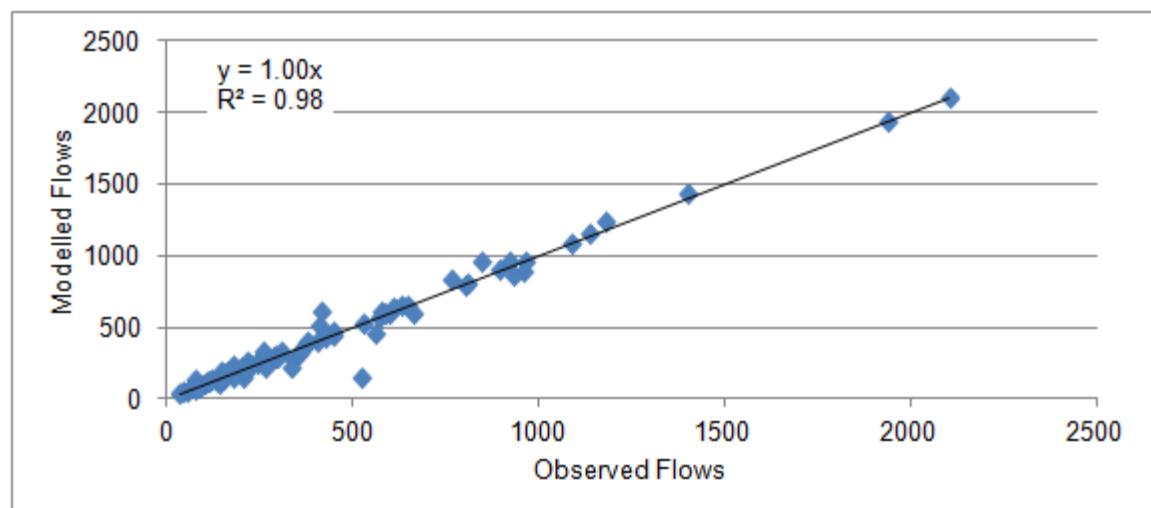

- 4.2.5 **Figures 4.1 to 4.4** show the modelled flows plotted against the observed with the best-fit regression line and correlation coefficient ( $R^2$ ), for the average weekday AM and PM peak hours. This helps visualise the goodness of fit. An  $R^2$  value

greater than 0.95 is considered to indicate that the model reflects observed traffic flows well.

- 4.2.6 The R<sup>2</sup> value for the validation in the borough of Waverley is 0.99 in the average weekday AM peak hour and 0.98 in the average weekday PM peak hour. With regards to the borough of Guildford, the R<sup>2</sup> value is 0.99 and 0.98 in the weekday average AM and PM peak hours respectively.

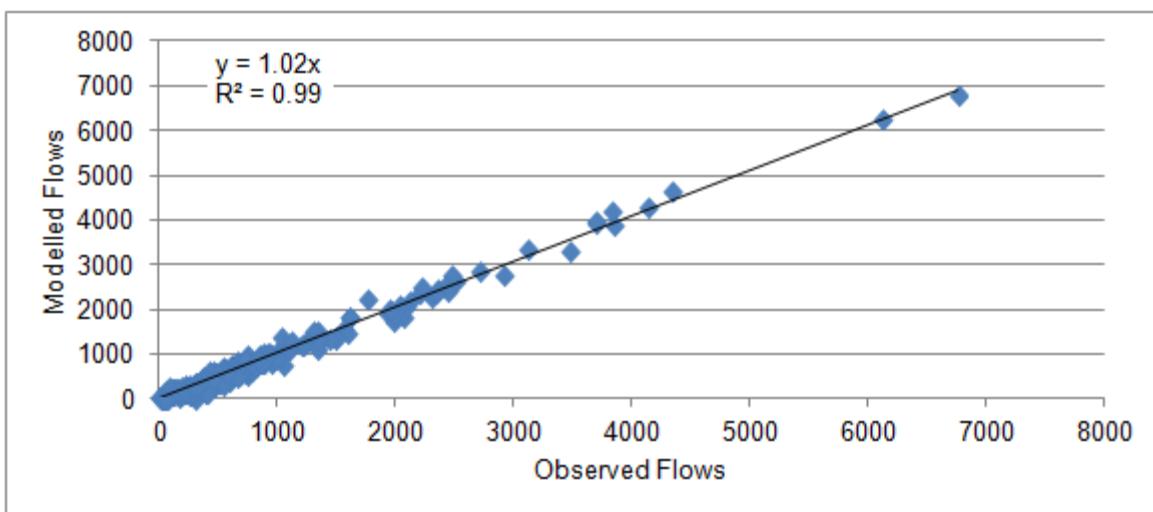

**Figure 4.1: Comparison plot of modelled against observed link flows in the borough of Waverley for the average weekday AM peak hour (0700 – 1000)**

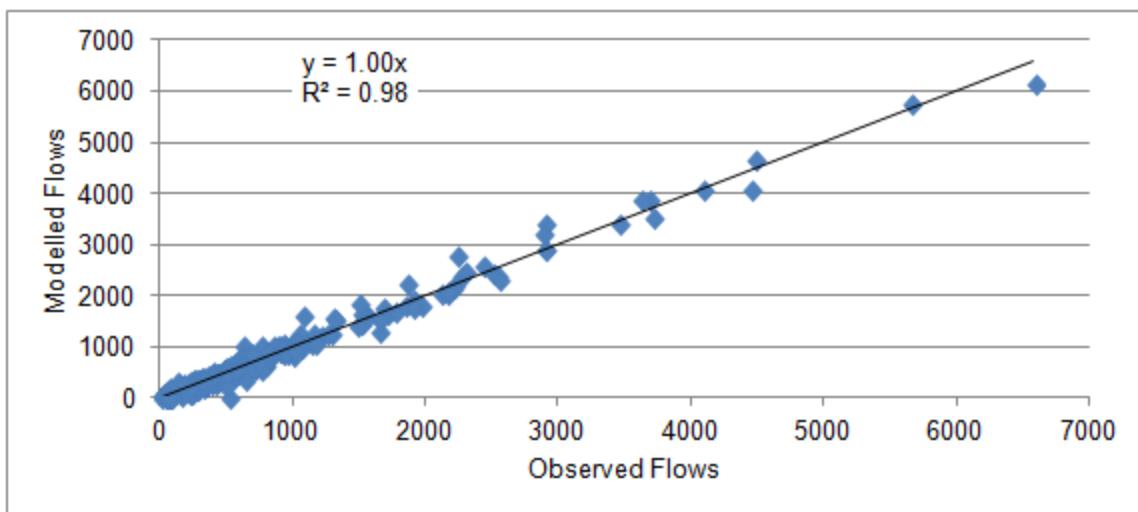

**Figure 4.2: Comparison plot of modelled against observed link flows in the borough of Waverley for the average weekday PM peak hour (1600 – 1900)**

- 4.2.7 A full comparison of observed and modelled flows is provided in Appendix A.

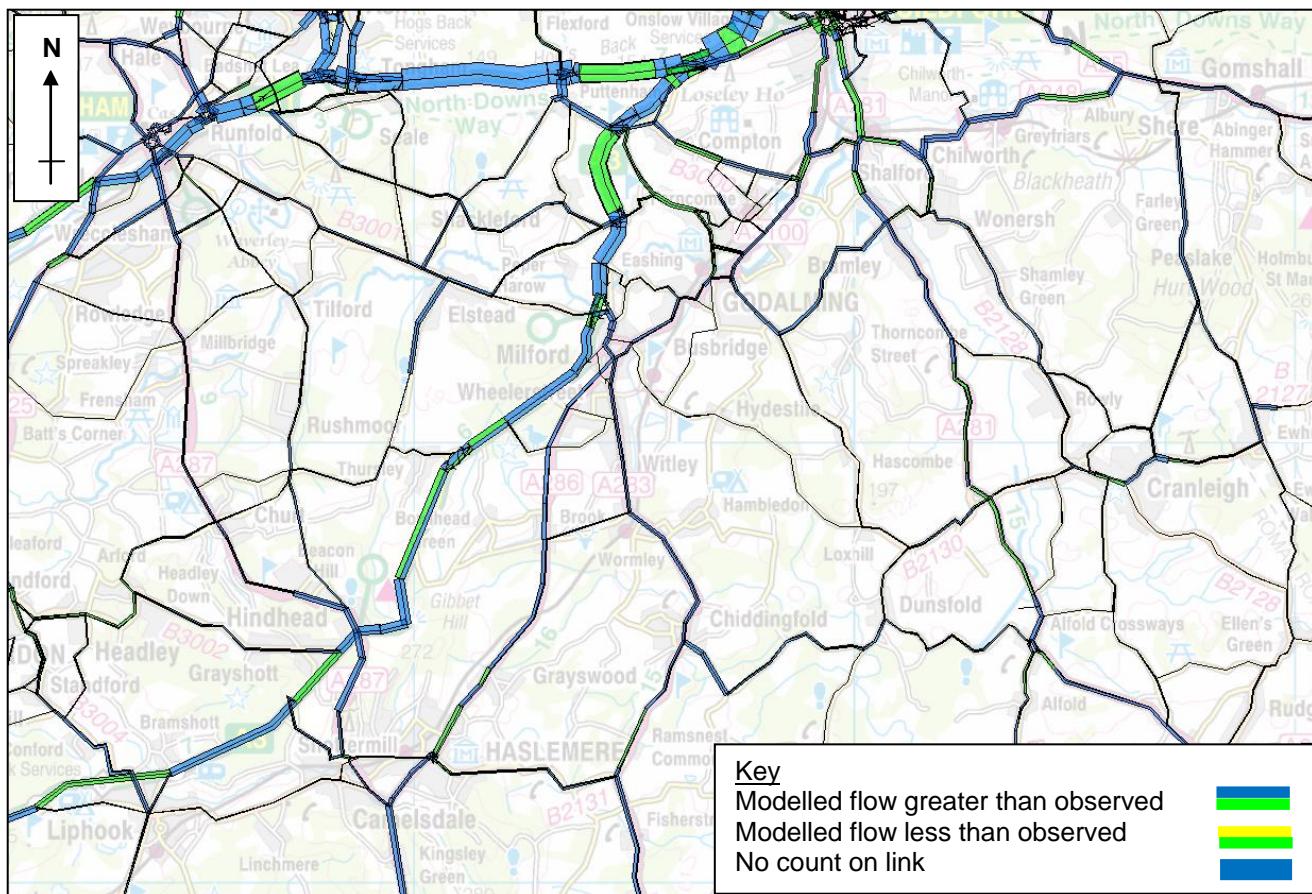

**Figure 4.3: Comparison plot of modelled against observed link flows in the borough of Guildford for the average weekday AM peak hour (0700 – 1000)**

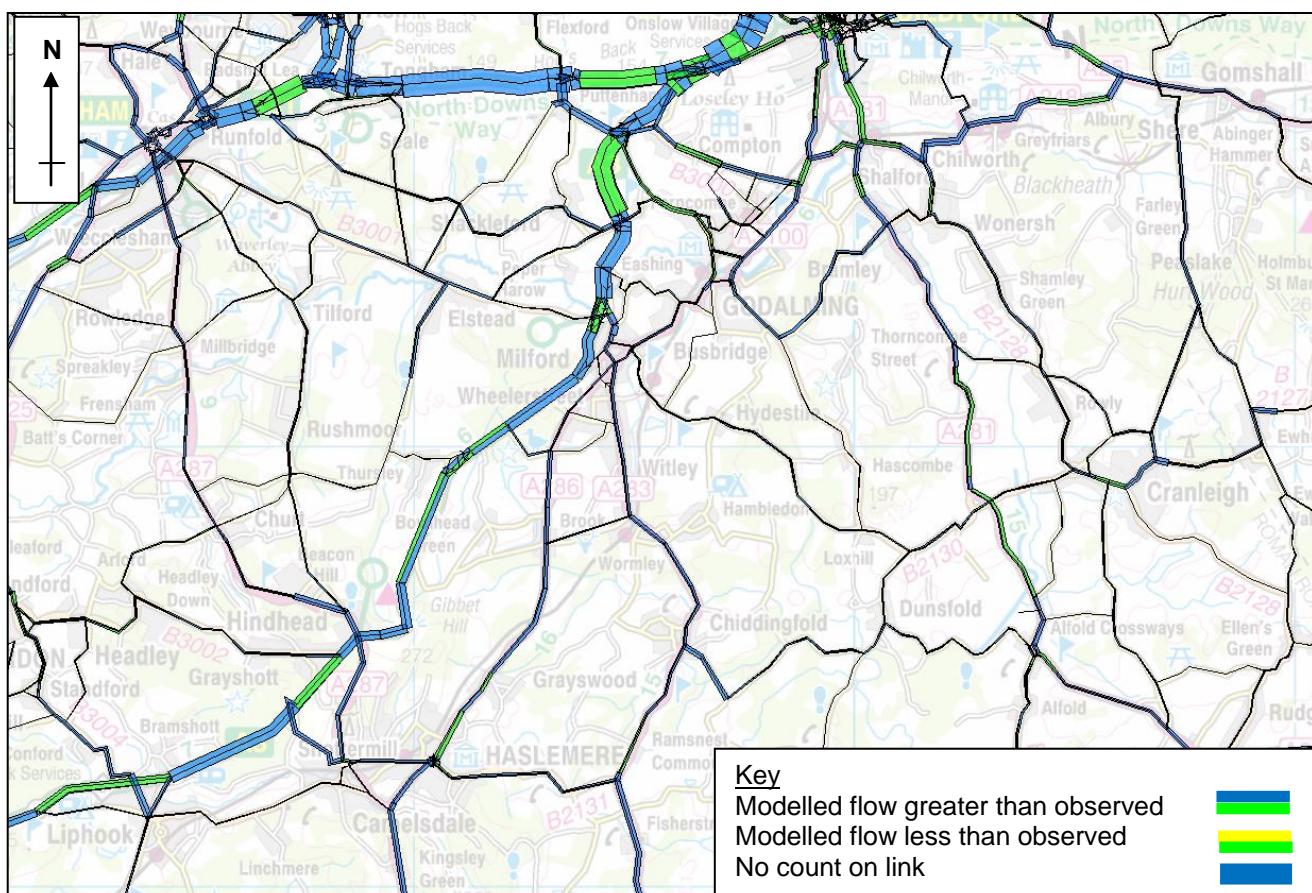

**Figure 4.4: Comparison plot of modelled against observed link flows in the borough of Guildford for the average weekday PM peak hour (1600 – 1900)**

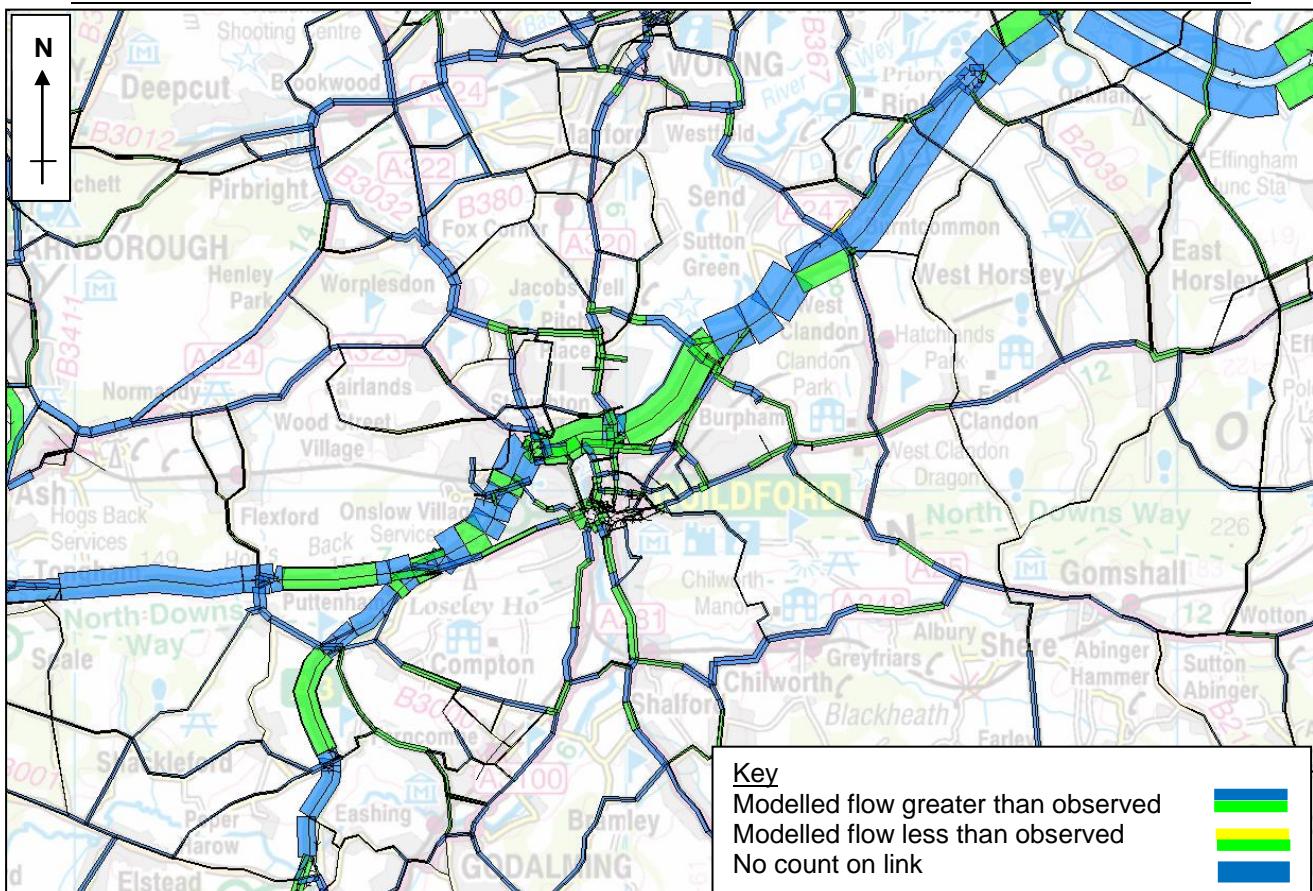

- 4.2.8 **Figures 4.5 to 4.8** display the observed versus model flow bandwidth plots for both Waverley and Guildford boroughs and for each model time period.
- 4.2.9 The bandwidths are proportional to the level of flow. A bandwidth coloured green indicates that an observed count is present on the link. Where the green bands are showing a yellow edge, the model flow is less than the observed flow. Where the green bands show a blue edge, the model flow is greater than the observed flow. Neither Waverley or Guildford are presenting model links with large yellow or blue edges to the green bands, this infers that the link flows are validating well in the model with minimal flows being over or under estimated by the model.

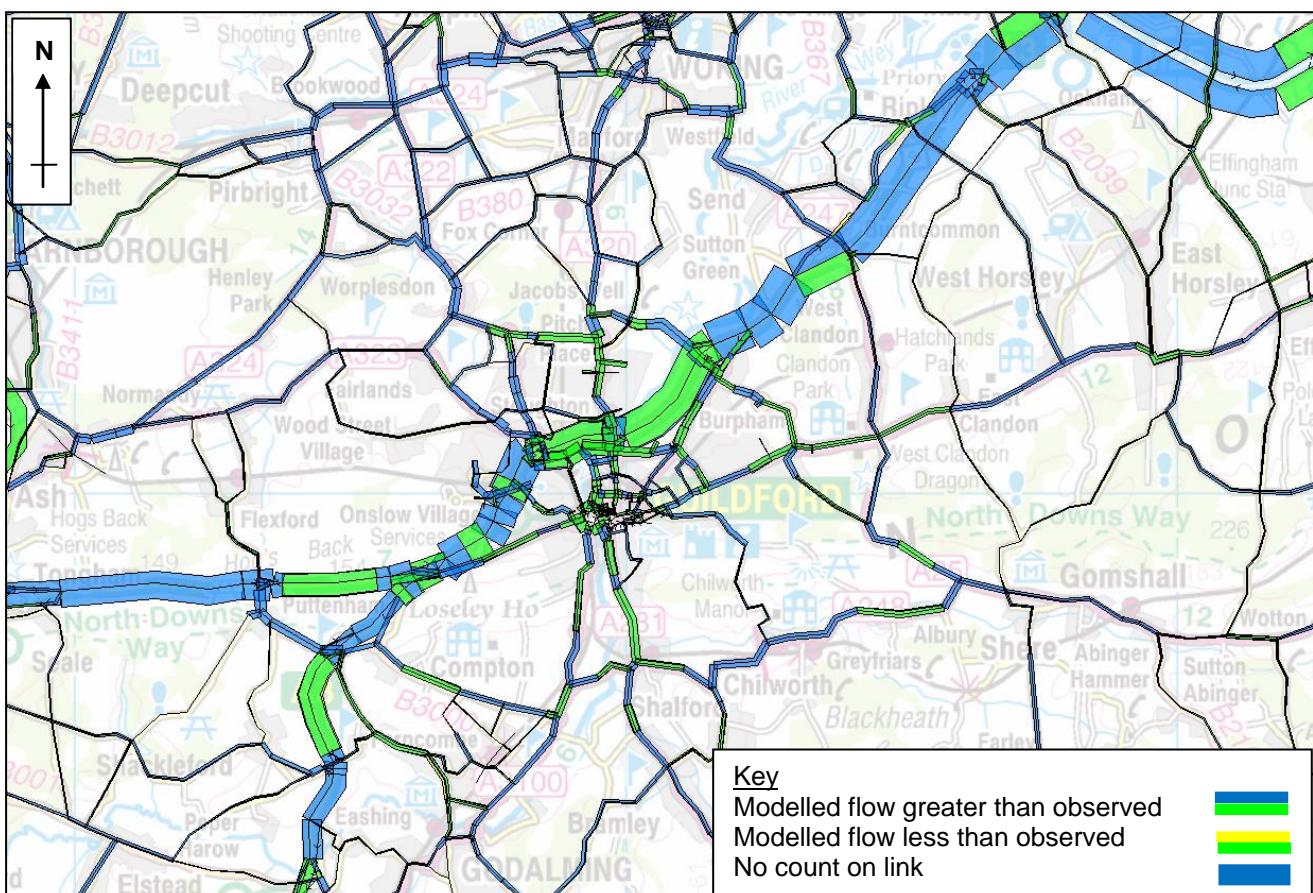

**Figure 4.5: Link flow validation in the borough of Waverley for the average weekday AM peak hour (0700 – 1000)**

**Figure 4.6: Link flow validation in the borough of Waverley for the average weekday PM peak hour (1600 – 1900)**

**Figure 4.7: Link flow validation in the borough of Guildford for the average weekday AM peak hour (0700 – 1000)**

**Figure 4.8: Link flow validation in the borough of Guildford for the average weekday PM peak hour (1600 – 1900)**

#### 4.3 Journey Time Validation

- 4.3.1 Journey time validation was not undertaken in the borough of Waverley. This was due to the very restricted timescales of the joint Waverley and Guildford Local Plan strategic transport assessment project, not allowing journey time routes to be extracted for Waverley.
- 4.3.2 However, it was possible to undertake journey time validation for the borough of Guildford as data was already available from previous assessment work.
- 4.3.3 Observed and model journey times have been compared for each model time period, in accordance with the DfT's validation acceptability guidelines<sup>2</sup>, presented in **Table 4.4**.

Criteria	Acceptability Guidelines
<i>Journey Times</i>	
Modelled journey times along routes should be within 15% of surveyed times, or 1 minute if higher	> 85% of routes

**Table 4.4: Journey time validation acceptability guidelines**

- 4.3.4 Observed journey times were acquired from Strat-e-gis Congestion, developed by Mott MacDonald. Strat-e-gis Congestion utilises congestion data supplied by Trafficmaster plc that is mapped to the Ordnance Survey (OS) Integrated Transport Network (ITN) in order to calculate journey time by ITN link. The Trafficmaster data is obtained from GPS-equipped vehicles traversing the highway.
- 4.3.5 Observed journey times were compared with those from the model across twenty key routes in the study area, as shown by **Figure 4.9**.
- 4.3.6 **Tables 4.5 and 4.6** present the journey time validation results by time period for the borough of Guildford. Both weekday average AM and PM peak journey times achieve the criteria set out in **Table 4.4**
- 4.3.7 Presentation of each analysed journey time route by distance is provided in **Appendix B**.

<sup>2</sup> Department for Transport (2014) Transport Appraisal Guidance *Unit M3.1, Highway Assignment Modelling*.

Table 4.6: Journey time validation results in Guildford borough for the average weekday PM peak hour (1600 – 1900)

## 5 CONCLUSION

- 5.1.1 This document sets out the development and validation of Surrey County Council's strategic transport model, SINTRAM, in the boroughs of Waverley and Guildford for their strategic Local Plan transport assessments
- 5.1.2 Observed and modelled traffic flows have been presented and compared. Similarly observed journey times along key corridors in Guildford borough have been compared with output from the model.
- 5.1.3 It is considered that the model is suitable for the assessment of both Waverley and Guildford Local Plan.
